PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building Generative AI applications, RAG pipelines, LLM-powered workflows, and Python backend systems. Built 4+ AI features and 30+ production REST APIs using Python, FastAPI, LangChain, LangGraph, embeddings, vector databases, and LLM APIs. Experienced in integrating AI with databases, enterprise APIs, and cloud applications, with hands-on use of AI-assisted development tools including Cursor, Antigravity, Codex, and GitHub Copilot.

TECHNICAL SKILLS

Languages & Backend: Python, SQL, FastAPI, REST APIs, Pydantic

Generative AI: Generative AI, LLMs, RAG, LangChain, LangGraph, AI Agents, Embeddings, Semantic Search, Prompt Engineering, Conversational AI

Vector & Data: Pinecone, FAISS, ChromaDB, PostgreSQL, Supabase, MongoDB, Redis

APIs & Cloud: NetSuite, FedEx, UPS/RocketShipIt, Amazon Seller API, DocuSign, Groq, OpenRouter, AWS, Docker

Development: Git, GitHub Actions, Jenkins, Railway, Cursor, Antigravity, Codex, GitHub Copilot

EXPERIENCE

Pragadas Technologies

Feb. 2025 – Present

Software Engineer — Generative AI & Backend Development

Hyderabad, India

- Developed and maintained 30+ production REST APIs using Python and FastAPI for a warehouse management system.
- Built LLM-powered and Generative AI applications using LangChain, LangGraph, RAG, embeddings, vector databases, and LLM APIs.
- Designed RAG workflows for document and company knowledge retrieval using embeddings and vector similarity search.
- Developed AI application POCs involving AI agents, semantic search, conversational AI, and LLM-powered workflows.
- Integrated NetSuite, FedEx, UPS/RocketShipIt, Amazon Seller API, and DocuSign with Python backend services.
- Worked with PostgreSQL, Supabase, Railway, AWS RDS, Docker, and GitHub Actions for backend development and deployment.
- Applied AI-assisted development using Cursor, Antigravity, Codex, and GitHub Copilot for implementation, debugging, refactoring, and development.

Tata Elxsi

Jan. 2023 – Feb. 2024

Engineer (Promoted from Intern) — Automation & CI/CD

Trivandrum, India

- Automated data parsing and validation workflows using Python to improve processing efficiency.
- Maintained Jenkins CI/CD pipelines for automated deployments and testing workflows.
- Integrated Python with C using `ctypes` to accelerate compute-heavy modules by 30%.
- Collaborated with automation teams to streamline CI workflows, reducing build and test cycle times by 25%.

PROJECTS

Movie Recommender System (Content-Based) — Python, Scikit-learn, NLP

- Built a TF-IDF and cosine-similarity recommendation engine using 5,000+ movie plots.
- Performed metadata cleaning, tokenization, and feature extraction for content similarity.
- Optimized vectorization and similarity computation for scalable, low-latency recommendations.

EDUCATION

National Institute of Technology Patna

July 2019 – May 2023

Bachelor of Technology in Electronics and Communication Engineering

CGPA: 8.86
